                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a gene (I) derived from Buchnera sp. CC containing the DNA (a) or (b), (a) has a fully defined base pair CC containing the DNA (a) or (b), (a) has a fully defined base pair CC sequence selected from a table of sequences found in the Buchnera sp. CC genomic DNA of ABA92787 given in the specification or is a DNA selected CC from complementary DNA sequences, and (b) is a DNA which hybridises with CC the DNA (a) and encodes a protein. Also described are: (1) a recombinant CC to CC (3) a genomic DNA of Buchnera sp. containing the sequence given in CC (3) a genomic DNA of Buchnera sp. containing the sequence given in CC (d), (c) is a DNA containing a fully defined sequence given in ABA92788 (C) (d), (c) is a DNA containing a fully defined sequence given in ABA92788 (C) is a DNA containing a fully defined sequence given in ABA92788 (C) the expression protein of the objective protein is collected from the CC resultant culture. The DNA is useful for developing agricultural CC chemicals for exterminating cockroaches. The present sequence, from the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Borrelia burgdorferi polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            04-MAY-1999
                                                                                                                                                                                          AAX20248 to AAX20402 represent polynuclectide sequences isolated from Borrelia burgdorferi (Bb). Products derived from Bb can be used for the detection, diagnosis, characterisation, prevention and therapy of Bb infections, e.g. Lyme disease. They can also be used for the production of biosynthetic products, e.g. enzymes. Borrelia belongs to a family of motile, spiral-shaped bacteria called Spirochetes. to a family of motile, spiral-shaped bacteria called Spirochetes of prochetes are pathogenic in humans and Borrelia causes epidemic and spirochetes are pathogenic in humans and Borrelia causes epidemic and endemic relapsing fever, and lyme borreliosis, more commonly known as
                                                                                                                                                                                                                                                                                                                                          New isolated Borrelia burgdorferi nucleic acids - used to products for the detection, diagnosis, characterisation, and therapy of infections, particularly Lyme disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          18-JUN-1998;

                                                                                                                                                                                                                          1744
                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511) and the encoded proteins
                                         Human prostate expression marker cDNA 34897.
                                                                     16-SEP-2002
                                                                                            ABV34906;
                                                                                                               ABV34906 standard; cDNA; 615
                                                                                                                                                                                                                                                                                                            Sequence 10589 BP; 3083 A; 2231 C; 2183 G; 3092 T; 0 other;

                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient;
                                                                                                                                                                                                                                                                                                                                               cancer in a patient;
(d) assessing the efficacy of a therapy for inhibiting prostate cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer, stage of prostate cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 1; Page 7298; 11750pp; English.

Pred. No. is the number of results predicted by chance to have

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                         This clone is from a chromosome X-specific cosmid library LLOXNCC01 'U'. The source of the chromosomes was a human/hamster hybrid, GM07297-F, from Robert Nussbaum at the University of Pennsylvania School of Medicine. Please contact the Lawrence Livermore National Laboratory at http://www-bio.llnl.gov/genome to obtain the clone. VECTOR: Lawrist16.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer/because we provide a small overlap between neighboring data submissions.

It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 8 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /lab_bost="MING" (Life Technologies) (Tl phage resistant) "
/note="Organ: eye; Vector: pT7T3-Pac (Pharmacia) with a
modified polylinker; Site_1: Rot I;
UI-E-EJO is a subtracted cDNA library constructed
according to Bonaldo, Lennon and Soares, Genome Research,
6:791-806, 1996. First strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded cDNA was ligated to an EcoR I adaptor, digested
with Not I, and cloned directionally into pT7T3-Pac
vector. The oligonucleotide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tags for this library are: fetal eyes, AGAATCAAGA
; lens, CGATTAAGCG; eye anterior segment, AATGCGCCAT;
optic nerve, CCATTAAGTG; retina, CGGCG; Retina Foveal and
Macular, GTCC; RPE and Choroid, ACCTA. This library was
created for the program, Gene Discovery in the Visual
System, supported by National Bye Institute (NEI)."

UI-E-EJO is a subtracted CDNA library constructed
according to Bonaldo, Lennon and Soares, Genome Research,
e:791-806, 1996. First strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded cDNA was ligated to an EcoR I adaptor, digested
with Not I; and cloned directionally into pT773-Pac
rector. The oligonucleotide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
sequence tags for the Not I site and the (dT) ls tail The
sequence tags for this library are: fetal eyes, AGAATCAAGA
optic nerve, CCATTAAGGTG; retina, CCGGG; Retina Foveal and
Accular, GTCC; RPE and Choroid, ACCTA. This library was
System, supported by National Eye Institute (NEI).

UI-E-RJO is a subtracted CDNA library constructed
according to Bonaldo, Lennon and Soares, Genome Research,
6:791-806, 1996. First strand CDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded CDNA was ligated to an EcoR I adaptor, digested
with Not I, and cloned directionally into pT73-Pac
vector. The oligonucleotide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tags for this library are: fetal eyes, AGAATCAAGA
ptic nerve, CCATTAAGTG; rettina, CCGCG; Rettina Foveal and
Macular, GTCC, RPE and Choroid, ACCTA. This library was
System, supported by National Eye Institute (NEI).
